Post Notification

Terminal Command

Large Type

Title: DownMus

Text: Calling dmus.py script to retrieve audio file...

The title and text you would like to output. Occurences of {query} will be substituted with the input. You can also substitute upstream variables into the output using {var:varname}. The notification will only show if Title and Text have content.

☐ Only show if the input has content

Only show this notification if the input {query} isn't empty.

☐ Last path component ☐ Remove extension

You can do basic filename based modifications to the input. Use Last path component to remove the file path, and Remove extension to remove the file type.
