Download audios from popular sources - v0.0.0

if {query} is equal to **Audio extraction succ** Ignoring Case then Output Label

else if {query} is equal to **Audio download succ** Ignoring Case then Output Label

+ Add a new condition

Alfred will process the output of the first matched condition. If input is left empty, the {query} input is evaluated. When using 'greater than' and 'less than', Alfred will evaluate the input and match strings as integers. Regexes evaluate according to ICU v3.
